

# The Future of Learning starts now

Really anywhere you want

## The Digital Industry Academy

# SITRAIN BeLux

### Different methods for maximum learning success

Face-to-face training or digital training, location-independent, 24/7, on-demand or learning at fixed dates and course times? With a personal learning consultant, in a team, or on your own responsibility? Everything is possible. With "Learning Journey", "Learning Membership" and "Learning Event", SITRAIN offers opportunities, in which the following methods are used differently according to the respective demand profile.

#### Learning Event

#### The compact and guided way to acquire knowledge

- Your learning consultant will lead you through the practical exercises and remain exclusively available throughout

the theoretical units

#### Learning Membership

#### Secure knowledge with independent and continuous learning

- Get access to the comprehensive and constantly growing range of self-learning units on SITRAIN access, our digital learning platform

#### Learning Journey

#### The perfect combination for a sustainable learning success

- You optimally absorb and retain the content through a mixture of self-learning units and live modules
- The SITRAIN learning consultant is, of course, available during the live modules and can also be contacted for individual coaching sessions in answering questions and individual consultation.

#### Have a wonderful learning experience

Today's demands on our knowledge are every bit as diverse and dynamic as our profession itself. We keep learning more and longer – for our work, for our career, and for ourselves. Advancing digitalization entails new topics, and is also changing the way we absorb and process knowledge. SITRAIN – Digital Industry Academy offers the right source of knowledge here, which we can use anytime in just the way we need it. The time for industrial learning is now..

## Learning Events @ SITRAIN BeLux

### Standard training

Our standard trainings are regularly planned, open trainings. This means that people from different companies can be in the same training.

The schedule is published on our website [www.siemens.be/sitrain](http://www.siemens.be/sitrain).

You can enroll for these trainings on the website and the price will be a price per participant for the complete course. In case of questions or if you want to book your colleagues/ coworkers on a course, you can contact our Customer Care Center: 02/536 27 00.

### Training on request / Customized training

- A training on request is a course from our standard catalog, organized on your request. In principle, the course content and duration are the same as the standard training. When and where the training will take place can be determined by mutual agreement.
- A customized training is a course that is made up and planned on your request. The topics, course content and/or structure... can deviate from the standard course portfolio and can be freely adapted. When and where the training will take place can be determined by mutual agreement.

The price for a training on request or a customized training is based on a price per day, despite the number of participants, which, however, is limited to a maximum number determined per course module.

These trainings can take place at SITRAIN BeLux in Beersel (Huizingen), in your company or even elsewhere.

### Online training with remote or virtual training equipment

We were there for you even in difficult times and provided you with the right digital learning offer. This allowed you to continue your education from home and whenever you want - and thus use the time for your knowledge building. Best of all, we continue to do so and we are continuously expanding our digital offering and always keep you up-to-date with the latest news.

In our online training courses, our expert instructors use live theory presentations and our virtual and/or remote learning environment for practical exercises to give you the full training content described in the learning objectives in a practical manner.

In our virtual classroom, our expert is available to you at any time for detailed questions and technical discussions, even during your individual practical exercises. You work in a virtual learning environment or remote with training devices and can visualize your exercise results in a virtual model.

Using a secure VPN connection, you get access to the remote training equipment, which, depending on the course, can consist of a Field PG, S7-PLC, frequency converter, PCS7 AS, ET200 distributed IO, etc.
